Physical causes of Female Sexual Dysfunction

Female sexual dysfunction can be caused by a number of conditions. Such conditions can include childbirth, Prescription drugs, menstrual considerations, or menopause. These conditions can strongly affect a woman's arousal levels and her ability to reach orgasm.

It is a fact that over 46% of American women experience little or no sexual satisfaction from clitoral orgasm and only 25% achieve orgasm with intercourse. In fact, countless numbers of women between the ages of 18 and 80 do not even know what an orgasm is or how an orgasm is achieved.

In the year 2004, medical estimates show about 43% of women will suffer from some type of sexual dysfunction. - *Journal of the American Medical Association*

Many studies attest to the importance of a good sexual balance for women in order to fully succeed in all aspects of their lives: as active women, spouses, and as mothers.

Liquid V for Women is great for women of all ages: regardless if you suffer from some form of sexual dysfunction (or not). Even if there is no sign or symptoms of female sexual dysfunction, Liquid V has been proven effective in many cases to help stimulate and heighten the sensitivity in a woman's erogenous zone.
